QUESTION: 89

Shown below is an IPSec standby scenario, with main link A and backup link B. Assuming that on link B the next-hop IP address is 10.10.1.2 and 10.10.1.3, and we want to ensure that the primary and redundant backup link via IP-Link is configured.

Which of the following is the correct cstatic routeonfiguration from the headquarters to the branch office?

- A. [USG] ip route-static 0.0.0.0 0.0.0.0 10.10.1.2
[USG] ip route-static 0.0.0.0 0.0.0.0 10.10.1.3
- B. [USG] ip route-static 0.0.0.0 0.0.0.0 10.10.1.2 ip-link 1
[USG] ip route-static 0.0.0.0 0.0.0.0 10.10.1.3 ip-link 2
- C. [USG] ip route-static 0.0.0.0 0.0.0.0 10.10.1.2 track ip-link 1
[USG] ip route-static 0.0.0.0 0.0.0.0 10.10.1.3 preference 70 track ip-link 2
- D. [USG] ip route-static 0.0.0.0 0.0.0.0 10.10.1.2 preference 70 track ip-link 1
[USG] ip route-static 0.0.0.0 0.0.0.0 10.10.1.3 track ip-link 2

Answer: C

QUESTION: 90

An enterprise branch firewall is configured for NAT. As shown in the figure, USG_B is the NAT gateway. In order to establish an IPSec VPN to USG_B, you need to configure what on USG_B? (Choose two answers)

- A. Configure a NAT Policy, citing the rule to allow the network segment's source and destination IP addresses for the ACL.
- B. Configuration the IKE peer, use name authentication, and remote-address of the interface address on USG_A
- C. Configure a NAT Policy, where there is first a deny IPsec rule within the enterprise network to protect the data flow from within the headquarters of the network, and then permit the enterprise network to the Internet network data stream.
- D. Configure a IPSec policy template, citing the IKE peer.

Answer: B, C

QUESTION: 91

In the Enterprise network shown below, Server A and Server B can not access Web services. Troubleshooting has found that there is firewall routing module and that there is a problem with the routing table in USG_A. An enterprise network follows, then Server A Server B can not access Web services, administrators troubleshoot and found no firewall routing module. A problem has been to establish the appropriate routing table, but Firewall A firewall module is provided with wrong.

What troubleshooting method should be used?

- A. stratification
- B. Break Law
- C. substitution method
- D. Block Method

Answer: D

QUESTION: 92

An SSL VPN user authenticates, has enabled network expansion on the PC, and has been assigned an IP addresses. However, the user can not access resources within the internal network server. Which of the following are possible reasons for this? (Choose three)

- A. Configuration error in the "Routing Client mode" configuration.
- B. User access is limited
- C. The network server is unreachable.
- D. The PC's physical interface and assigned VPN addresses overlap.

Answer: A, B, C

QUESTION: 93

SSL VPN authentication is successful, and with the use of the file-sharing feature, you can view the directories and files, but you can not upload, delete, or rename files. What are possible reasons? (Choose two answers)

- A. If the file server for NFS, the user's UID and GID attribute does not allow users to upload, delete or rename the file operation.
- B. If the type of file server for SMB, the user currently logged on to the file share resource has only read permission and no write access.
- C. The SSL firewall configuration file sharing feature allows only viewing.
- D. Some TCP connections between the gateway and the virtual file server are blocked by the firewall.

Answer: A, B

QUESTION: 94

A simple network is connected PC1-USG-Router-PC2. If PC1 sends packets to PC2, and the USG processes fragmented packets, which modes can be used to do this? (Choose three answers)

- A. fragment cache
- B. slice discarded
- C. fragmentation direct forwarding
- D. slicing defense

Answer: A, B, C

QUESTION: 95

In IP-link, how many successive packets must not be received for it to be considered a failure, by default?

- A. 1 times
- B. 2 times
- C. 3 times
- D. 5 times

Answer: C

QUESTION: 96

With Blacklist, which part of the packets are examined to determine there is an attack?

- A. The source address
- B. destination address
- C. Source Port
- D. destination port

Answer: A

QUESTION: 97

Which statement about IP-link features are correct? (Choose three answers)

- A. IP-link is a link connectivity detection function
- B. ARP detection methods only support direct link
- C. Firewalls will send ICMP or ARP packets to determine if the destination address is reachable to the destination address of a probe
- D. With IP-link and associated VGMP, when the IP-Link status becomes down, VGMP lowers the default priority management group by 3.

Answer: A, B, C

QUESTION: 98

Refer to the following load balancing configuration:

```
[USG] slb enable
[USG] slb
[USG-slb] rserver 1 rip 10.1.1.3 weight 32
[USG-slb] rserver 2 rip 14.1.1.4 weight 16
[USG-slb] rserver 3 rip 10.1.1.5 weight 32
[USG-slb] group test
[USG-slb-group-test] metric srchash
[USG-slb-group-test] add rserver 1
[USG-slb-group-test] add rserver 2
[USG-slb-group-test] add rserver 3
```

Which of the following statements is correct? (Choose two answers)

- A. The load balancing algorithm is the polling algorithm.
- B. The configuration is a complete load balancing configuration.
- C. Values of weight determine which data stream path should be used, the smaller weight values should correspond to the real server that has less processing capacity.
- D. Weight is the weight of a real weight.

Answer: C, D

QUESTION: 99

About BFD detection mechanism, the following statement is correct? (Choose two answers)

- A. BFD control packets are encapsulated in TCP packets
- B. BFD provides two detection modes: asynchronous and synchronous mode

- C. After the establishment of a BFD session, both systems periodically send BFD control packets
- D. At the beginning of the session, the two sides negotiate through the control system carried in the packet parameters

Answer: C, D

QUESTION: 100

An attacker sends a large number of SIP INVITE messages to the server, leading to a denial of service attack on the SIP server.

This attack occurs on which layer of the seven layer OSI model?

- A. Application Layer
- B. Network Layer
- C. Transport Layer
- D. Data Link Layer

Answer: A

Killexams.com is a leading online platform specializing in high-quality certification exam preparation. Offering a robust suite of tools, including MCQs, practice tests, and advanced test engines, Killexams.com empowers candidates to excel in their certification exams. Discover the key features that make Killexams.com the go-to choice for exam success.

Exam Questions:

Killexams.com provides exam questions that are experienced in test centers. These questions are updated regularly to ensure they are up-to-date and relevant to the latest exam syllabus. By studying these questions, candidates can familiarize themselves with the content and format of the real exam.

Exam MCQs:

Killexams.com offers exam MCQs in PDF format. These questions contain a comprehensive collection of questions and answers that cover the exam topics. By using these MCQs, candidate can enhance their knowledge and improve their chances of success in the certification exam.

Practice Test:

Killexams.com provides practice test through their desktop test engine and online test engine. These practice tests simulate the real exam environment and help candidates assess their readiness for the actual exam. The practice test cover a wide range of questions and enable candidates to identify their strengths and weaknesses.

Guaranteed Success:

Killexams.com offers a success guarantee with the exam MCQs. Killexams claim that by using this materials, candidates will pass their exams on the first attempt or they will get refund for the purchase price. This guarantee provides assurance and confidence to individuals preparing for certification exam.

Updated Contents:

Killexams.com regularly updates its question bank of MCQs to ensure that they are current and reflect the latest changes in the exam syllabus. This helps candidates stay up-to-date with the exam content and increases their chances of success.
