- A. Non-sensitive data processing
- B. High-performance computing tasks
- C. Mobile application development
- D. Financial transaction processing

Answer: D

Explanation: The Hybrid Cloud Platform is particularly important for regulated workloads such as financial transaction processing, where a combination of on-premises and cloud resources is necessary to meet compliance requirements.

Question: 2

How do service level agreements (SLAs) contribute to system availability in the IBM Cloud for Financial Services?

- A. SLAs ensure data integrity and confidentiality.
- B. SLAs define the scope of security audits.
- C. SLAs guarantee high uptime and performance.
- D. SLAs establish backup and disaster recovery plans.

Answer: C

Explanation: Service level agreements (SLAs) in the IBM Cloud for Financial Services define the expected level of system availability, ensuring high uptime and performance for critical financial services workloads.

Question: 3

What is the purpose of Service Level Agreements (SLAs) in IBM Cloud for Financial Services?

- A. To define the pricing structure for the cloud service.
- B. To specify the hardware requirements for the customer workload environment.
- C. To outline the scope of customer support provided.
- D. To establish the performance guarantees and responsibilities of the service provider.

Answer: D

Explanation: Service Level Agreements (SLAs) in IBM Cloud for Financial Services establish the performance guarantees and responsibilities of the service provider. SLAs define metrics such as uptime, response times, and service availability, ensuring that the service provider meets the agreed-upon performance standards.

Question: 4

Which of the following is a key requirement for achieving compliance in IBM Cloud for Financial Services?

- A. Regular penetration testing and vulnerability assessments.
- B. Integration with social media analytics tools.
- C. Support for cryptocurrency transactions.
