Answer: C

QUESTION: 94

A common problem when accessing the data source from the test environment is that an error about naming is indicated. What is the MOST likely source of the problem?

- A. The database configuration did not include this datasource name.
- B. No data source has been created.

- C. The data source has insufficient client access rights to the database and is failing during the initial connect phase of the access.
- D. The JNDI name of the datasource matches the name used by the client attempting to access it.

Answer: B

QUESTION: 95

Which of the following is NOT a recommended reason to create a portlet service?

- A. A service should be created when code could be shared across portlet applications.
- B. Services are useful in abstracting model behavior from the controller layer in a MVC design.
- C. Services are used to override existing portal API calls and allow applications to insert their own logic instead.
- D. A service provides a mechanism whereby the implementation can be changed or enhanced transparently to the portlet.
- E. Services can be used when a portlet requires behavior that can not be deployed via a "war" file (such as an EJB client based application).

Answer: C

QUESTION: 96

Which of the following interfaces is used to create a portlet service factory?

- A. The PortletServiceDefaultFactory interface is used to create a portal service factory for a given service.
- B. The PortletServiceCacheFactory interface is used to create an instance of another cached portal service factory.
- C. The PortletServiceGenericFactory interface is used to create a basic portal service factory.
- D. The PortletServiceFactory interface is used to implement a custom portal service factory.

Answer: D

QUESTION: 97
