**QUESTION: 125**

You are responsible for reviewing a plan to migrate a DB2 subsystem from Version 9 NFM to Version 10 CM. In the installation / migration documentation, you read the following: "Provide an SMS environment for managing DB2 catalog and directory data sets. The SMS environment must include a data class for allocating the data sets in extended format and using extended addressability." The plan you are reviewing does not include a step to convert the existing DB2 catalog and directory data sets. How should you react to this?

- A. You should not be concerned with this, since the data sets will be converted the first time the related table spaces are reorganized after migration.
- B. You should not be concerned with this, since all DB2 datasets are reorganized and converted as part of the catalog restructuring during the migration to Version 10.
- C. You should point out that the plan must be modified to include a step to convert the existing DB2 catalog and directory data sets to the SMS environment before migrating to Version 10.
- D. You should point out that the plan must be modified to include a step to drop the existing DB2 catalog and directory data sets because the migration to Version 10 will create them with the appropriate SMS settings.
