QUESTION: 362

Consider the following New Antivirus Rule dialog:

The screenshot shows the 'New Antivirus Provider Rule' dialog box. The title bar indicates the path: Edit Policy > Add Enforcement > New Antivirus Rule. The dialog has 'Save' and 'Cancel' buttons. The main content area is divided into sections: 'Rule Conditions', 'Rule Action', and 'Remediation'.
- **Rule Conditions:** Includes options for 'Keep clients in sync with the reference client, within the following number of days for the DAT file: 0', 'Minimum engine version: *', and 'This program must always be running' (checked).
- **DAT Enforcement:** Includes 'Minimum DAT file version: * 270.9.10/1834', 'Oldest DAT file time stamp: * 2008 Dec 7 at 00:09 GMT', and 'Maximum DAT file age, in days: * 1'.
- **Rule Action:** Includes radio buttons for 'Observe clients that don't comply', 'Warn clients that don't comply', and 'Restrict clients that don't comply' (selected).
- **Remediation:** Includes 'Language: English', 'Custom alert/sandbox text: Your antivirus was found out-of-compliance. To update, access your shared network folder.', 'Specify a remediation resource' (checked), 'Remediation Resource' (Upload a file to use as a remediation resource: C:\shared\y7iavi1834; Browse...), 'Include link to external URL:', 'Automatically apply the remediation resource when a client goes out of compliance (restricting rules only)', 'Run with arguments:', 'Auto-Remediation Options' (Automatically apply remediation resource selected), and 'Resource Verification' (Determine MD5 for Verification selected).

In a secure environment, to ensure endpoint clients are properly protected, which of the following is the BEST method to protect them?

- A. Specify a remediation resource
- B. Create a custom remediation message
- C. Warn Clients that don't comply
- D. The minimum DAT file age should be 1 day

Answer: D

QUESTION: 363

Regarding policy assignment, which of the following is always processed first by default?

- A. Gateway

- C. IP Catalog
- D. User Catalog

Answer: A

QUESTION: 364

Regarding policy assignment, which of the following is at the top of the order on the list and cannot be changed under any circumstances?

- A. User Catalog
- B. IP Catalog
- C. Gateway
- D. VPN Catalog

Answer: C

QUESTION: 365

Regarding policy assignment, which of the following is not a valid catalog?

- A. IP Catalog
- B. Gateway
- C. User Catalog
- D. VPN Catalog

Answer: D

QUESTION: 366

In Endpoint Security Server version 7.2, which has priority in rule arbitration for inbound traffic?

- A. Zone Rules
- B. Firewall Rules
- C. Enforcement Rules
- D. Gateway

Answer: B

QUESTION: 367

When no disconnected policy has been assigned, what setting must be selected to prevent the personal policy from being enforced?

- A. Enforce enterprise policies only
- B. Disable Personal Policy
- C. Disable the Windows Firewall
- D. Enable HotSpot registration

Answer: A

QUESTION: 368

When Enforce enterprise policies only option is not selected, what occurs?

- A. Personal Policies are always enforced.
- B. Enterprise policies and personal policies are arbitrated, and the most restrictive policy rule is enforced.
- C. Enterprise policies and personal policies are arbitrated, and the least restrictive policy rule is enforced.
- D. Enterprise polices are always enforced.

Answer: B

QUESTION: 369

When Enforce enterprise policies only option is not selected and the enterprise and personal policy rules are in contention, what occurs?

- A. The least restrictive rules apply.
- B. The most restrictive rules apply.
- C. No arbitration is performed; the personal policy is always enforced.

Answer: B

QUESTION: 370

On a new server installation of Endpoint Security Media Encryption, who has access to the Administration Console?

- A. All Domain Users.
- B. Members of the Domain Admins group.
- C. Members of the local Administrators group.
- D. Only the built in Administrator account.

Answer: C

QUESTION: 371

What setup command would you use to create a recorded ME Client installation?

- A. setup.exe -r
- B. setup.exe -s
- C. setup.msi /r
- D. setup.exe -capture

Answer: A

QUESTION: 372

When you created your client install package, you entered the incorrect ME server name and now your clients cannot connect to download their profiles, how can you update your clients to point to the correct server?

- A. Change the server name in the default profile, export the profile in .dnp format, import .dnp on the affected clients.
- B. On each client, edit the registry key: HKLM\Software\CheckPoint\Encryption\Servername with the correct ME server name.
- C. Update the server.ini file on each client with the correct server name.
- D. On each client, edit the registry key: HKLM\Software\Reflex\Disknet\Servername with the correct ME server name.

Answer: D

QUESTION: 373

You have deployed the client software to an endpoint computer and you want to check the profile that is active on the client. The best way to do this is using the Profile View and checking the parameter templateInfo name. How do you access the Profile View screen?

- A. Right click on the Media Encryption systray icon and select View Profile.
- B. Right click on the Media Encryption systray icon and select Settings then press Ctrl+Shift+F6.
- C. Open a command prompt and enter the command `Pointsec.exe /view:profile`.
- D. Right click on the Media Encryption systray icon and select Settings then click on the View Profile button.

Answer: B

QUESTION: 374

Pulling a profile from a Windows XP Client and pushing a profile from the Media Encryption server appears to fail and there is no message to confirm or deny that a profile has been updated. What could be the problem?

- A. If using Windows Firewall, Ports TCP 9738 and UDP 9738 must be permitted on both the server and the client machines.
- B. The client must be added to the Trusted Zone List.
- C. If using Windows Firewall, TCP must be permitted on both the server and the client machines.
- D. If using Windows Firewall, UDP must be permitted on both the server and the client machines.

Answer: A
