*Citrix Password Manager 4.5: Administration*

<http://killexams.com/pass4sure/exam-detail/1Y0-327>

**Answer:** D

**QUESTION:** 121

For recruiting purposes, research associates for a cancer study use an application that accesses confidential and sensitive patient information. Due to the nature of the information being accessed, the administrator requires that research associates verify their identities before accessing this particular application. Which password policy setting should the administrator enable to meet the requirements of this scenario?

- A. Submit application credentials automatically
- B. Use the password expiration settings associated with the application definitions
- C. Require smart card authentication before submitting application credentials
- D. Force user to re-authenticate before submitting application credentials

**Answer:** D

**QUESTION:** 122

Which two methods can an administrator use to make self-service password reset available to end users? (Choose two.)

- A. Publish SSPR.EXE on the server running the Citrix Presentation Server.
- B. Select the self-service password reset option within the Password Manager agent software Tools Menu.
- C. Configure Web Interface with self-service password reset functionality.
- D. Install the Password Manager agent software with the self-service password reset option on the user's workstation.
- E. Enable the self-service password reset option in Citrix Presentation Server Policies.

**Answer:** C,D

**QUESTION:** 123

You work as a network engineer at Certmagic.com. One of your administrators created a password policy for the Billing and Collections group. This policy restricts users from using parts of their Windows or individual application user names in their passwords. The administrator set the "Number of characters in portion" to 4. Based on the created password policy, which password is appropriate for a user with a login ID of fargo21?

- A. farg255
- B. arg256
- C. go2199
- D. rgo289

**Answer:** B

**QUESTION:** 124

Certmagic.com has purchased 50 concurrent user licenses for use on in-house workstations. One employee needs to provide training at a customer site. This employee will be at the customer site with a laptop computer and is required to use Password Manager. The employee will be at the customer site for one to two weeks of each month for the rest of the year. Which series of actions enables this company to provide a license to this user without purchasing any more licenses?

- A. Configure the License Management Console to allow the user to work in a disconnected mode period for one week.
- B. Configure the License Management Console to allow the user to work in a disconnected mode period for two weeks.
- C. Modify the user configuration to work in a disconnected mode period for two weeks.
- D. Modify the user configuration to work in a disconnected mode period for one week.

**Answer:** C

**QUESTION:** 125

You work as a network engineer at Certmagic.com. One of your administrators revokes security question registration for a user. The user in this environment is very busy and decides to ignore the Citrix Password Manager Registration dialog box and does not re-

register his answers when prompted. Which three impacts will this decision have on the user experience? (Choose three.)

- A. If question-based authentication is being used for key recovery, the Password Manager agent will terminate when the user cancels the Registration Wizard.
- B. The user's security question data will be retained and any question-based authentication feature will still be available with the current answers.
- C. The user's security question data will be deleted.
- D. The user's stored credentials will be deleted from the central store.
- E. The user will NOT be able to use Account Self-Service features until he re-registers his answers.

**Answer:** A,C,E

**QUESTION:** 126

Which two tasks must an administrator complete to enable self-service password reset for users? (Choose two.)

- A. Enable self-service password reset in the user configuration.
- B. Install the Self-Service feature in the agent software.
- C. Install the Key Recovery feature in the agent software.
- D. Enable self-service password reset in the Logon Manager.

**Answer:** A,B

**QUESTION:** 127

You work as a network engineer at Certmagic.com. One of your administrators configured an application definition for a "New CRM Database" Windows application. The administrator tested the application on a computer that had the Citrix Password Manager agent software installed. The agent software correctly detected and submitted credentials for the application. Now the administrator is configuring a second form for this application definition to allow Password Manager to recognize and interact with the Change Password window for this application. When the administrator reached the "Identify form" step, he noticed the following window title for the change password form of the application: "Change

Password - 10:30PM", where the time represents real time. How can the administrator configure this change password form so that it is recognized by Password Manager?

- A. Use the Select button to have Password Manager automatically fill in the window title
- B. Manually add the window title of 'Change Password - \*'
- C. Use the Select button to have Password Manager automatically fill in the window title, and then edit it to delete the time portion of the window title
- D. Manually add the window title of 'NULL' for this application
- E. Manually add the window title of 'Change Password - ?'

**Answer:** B

**QUESTION:** 128

Which action is required if an administrator wants an application group to be treated as a domain password sharing group?

- A. Apply the domain password policy to at least one of the applications in the application group.
- B. Apply the domain password policy to the application group.
- C. Apply the default password policy to the application group and make it a password sharing group.
- D. Enable initial credential setup on the application group so the domain password is used for the defined applications.

**Answer:** B

**QUESTION:** 129

A Password Manager environment requires the addition and configuration of a Windows application that requires a user ID, password, and domain for authentication. Who can add and configure logon credentials for this application and how can it be done?

- A. The user or administrator can add and configure logon credentials using the console.
- B. Only the administrator can add and configure logon credentials using Logon Manager.

- C. The user or administrator can add and configure logon credentials using Logon Manager.
- D. Only the administrator can add and configure logon credentials using the console.

**Answer:** D

**QUESTION:** 130

You work as a network engineer at Certmagic.com. One of your administrators creates a user configuration and assigns an application to the user configuration. The administrator then logs in as a user but does not see the application available in Logon Manager. What is a possible cause of this behavior?

- A. The administrator has disabled client-side application detection.
- B. The administrator specified an invalid license server.
- C. The administrator did not install the application on the user's workstation.
- D. The administrator used a user account that was not assigned to the user configuration.

**Answer:** D
