Security Best Practices for Mac OS X v10.4

<http://killexams.com/pass4sure/exam-detail/9L0-612>

- A. SSL without certificates allows unsecure web mail.
- B. Enabling SSL from the pop-up menus does not require the use of certificates, because it does not involve the command line.
- C. In the "Accept SMTP relays only from these hosts and networks" option, the default setting of 127.0.0.1/32 prevents anyone from using your mail server as an open relay.
- D. The "Accept SMTP relays only from these hosts and networks" option must be configured with the network ranges of all hosts that will be allowed to use this mail server as an SMTP server.

Answer: C
