- A. archive items via Outlook
- B. view archived items via Outlook
- C. search for items using Browser Search
- D. search archived items via Outlook
- E. initial synchronization of Vault Cache

**Answer:** A, B

**QUESTION:** 89

A consultant has configured mailbox archiving from an Exchange 2010 target. The mailbox databases are part of an Exchange Database Availability Group (DAG). The targeted mailbox database is replicated to two Exchange servers: Server-A and Server-B. The active database copy is hosted on Server-A, and Enterprise Vault (EV) has been successfully archiving mailboxes for several weeks. The EV Exchange Provisioning Task is scheduled to run twice a day at 12:00 AM and 12:00 PM, and the Exchange Mailbox Archiving task is scheduled from 6:00 PM to 12:00 AM. At 3:00 PM, Server-A

experiences a failure and the database copy located on Server-B is activated. What happens when the scheduled archive run starts at 6:00 PM?

- A. error events are generated in the event log and the task goes into a failed state
- B. an event is generated alerting the administrator to the situation and the mailboxes are archived
- C. provisioning automatically runs and the mailboxes are archived normally
- D. zero errors are generated and the mailboxes are archived only after the provisioning task runs at 12:00 AM

**Answer:** B

**QUESTION:** 90

A consultant is onsite and notices that MSMQ contains a large number of items. What does the A5 queue for Mailbox Archiving represent?

- A. Synchronization requests
- B. Process Mailbox, Process System (Run Now)
- C. Process Mailbox, Process System (Schedule only)
- D. Process Moved Items In Folder

**Answer:** C

**QUESTION:** 91

Which two events can Enterprise Vault (EV) audit? (Select two.)
