QUESTION: 352

What is the difference between "kill pid" and "kill -9 pid", where pid represents the process identification number?

- A. "kill pid" allows outstanding I/O to complete, the "kill -9" terminate the job immediately, aborting any outstanding I/O
- B. "kill pid" produces a core dump, the "kill -9" terminates the job now aborting any outstanding I/O
- C. There is no difference
- D. The "kill pid" ask you to confirm the kill, the "kill -9" terminates the job now

Answer: B

"kill pid" send a SIGTERM telling the process to exit. The process can act how ever it wants. If not explicitly handled the process will not core dump but just exit. "kill -9" send a SIGKILL to the process this causes the process to immediately exit. This action cannot be ignored or modified. In either I/O buffered outside of the process is flushed.

QUESTION: 353
