## HP0-771

*Designing and Implementing HP Enterprise Backup Solutions*

<http://killexams.com/pass4sure/exam-detail/HP0-771>

- A. copy backup
- B. normal backup
- C. differential backup
- D. incremental backup

**Answer:** C

**QUESTION:** 51

What is the primary function of client agent software in a centralized server backup configuration?

- A. to run on the clients in the network in order to pull data from other clients in the network
- B. to run on the clients in the network in order to push data to the server hosting the backup device
- C. to run on the server hosting the backup device in order to pull data from other clients in the network
- D. to run on the server hosting the backup device in order to push data to the server hosting the backup device

**Answer:** B

**QUESTION:** 52

Which three statements about incremental backups and differential backups are true? (Choose three.)

- A. Differential backups typically take longer than incremental backups.
- B. Incremental backups typically involve more data than differential backups.
- C. Differential backups typically involve more data than incremental backups.
- D. For recoveries, differential backups require fewer steps than incremental backups.
- E. For recoveries, incremental backups require fewer steps than differential backups.

**Answer:** A, C, D

**QUESTION:** 53

How do snapshots preserve the integrity of data copied to tape?

- A. by creating a list of files at a particular instant
- B. by creating a list of directories at a particular instant
- C. by creating a virtual copy of the data at a particular instant
- D. by creating a physical copy of the data at a particular instant

**Answer:** C

**QUESTION:** 54

Which two statements are true for when you would use clones instead of snapshots for split-mirror backup? (Choose two).

- A. Fault tolerance is good.
- B. Data is lost if disks are lost.
- C. A smaller amount of disk storage for data is required.
- D. No performance impact on original disks occurs during backups.

**Answer:** A, D

**QUESTION:** 55

Which are true as it relates to a LAN-based Centralized Server Backup solution? (Choose three.)

- A. consumes LAN bandwidth
- B. single point of failure (backup server)
- C. must manage each server individually
- D. relatively expensive; tape drives cannot be shared
- E. LAN bandwidth may limit backup and restore speeds

**Answer:** A, B, E

**QUESTION:** 56

What two advantages does data replication to a remote site give the customer? (Choose two.)

- A. reduced traffic between the server and storage devices
- B. three-way disk mirroring so that one set can be split off for backup
- C. disaster recovery and high availability of business critical applications
- D. backup jobs can be run at the secondary site to avoid overhead on the production server at the primary site

**Answer:** C, D

**QUESTION:** 57

A customer has chosen to back up data from disk directly to disk. What are two advantages to this type of strategy? (Choose two.)

- A. instant recovery
- B. restores and backups in parallel
- C. long-term archiving for easy offsite storage
- D. increased reliability through the use of RAID

**Answer:** B, D

**QUESTION: 58**

A company performs a full backup each Sunday and daily incremental backups at night. The server experiences total data corruption on Thursday afternoon. What is the proper restore procedure?

- A. restore using only Sunday's backup
- B. restore using only Wednesday's backup
- C. restore using Sunday's backup and Wednesday's backup
- D. restore using Sunday's backup and each backup after Sunday

**Answer: D**

**QUESTION: 59**

What three advantages does a tape library offer over a standalone tape drive? (Choose three.)

- A. increased capacity
- B. increased automation
- C. decreased LAN utilization
- D. increased device reliability
- E. increased remote device management capabilities

**Answer: A, B, E**

**QUESTION: 60**

A company performs incremental backups Monday through Friday, and on Saturday they run a full backup. There are five Saturdays in one month. Each backup can be accomplished with one tape. The company implements a typical Grandfather-Father-Son tape rotation scheme. They recycle the Sons on a weekly basis. The Father occurs each Saturday. How many tapes are required to run one month of backup?

- A. 10
- B. 11
- C. 22
- D. 33

**Answer: B**
