- A. scan data being backed up during job
- B. choose level of encryption for jobs
- C. run a job when a ThreatCon level is reached
- D. enable encryption of data, depending on media used

Answer: C

QUESTION: 142

What is a characteristic of Symantec Backup Exec 2012 Convert to Virtual (P2V)?

- A. Simplified Disaster Recovery-enabled Backups are required for virtual conversions.
- B. Backup tasks that go directly to tape can be used for P2V.
- C. Symantec Backup Exec 2012 P2V now supports VMware, Citrix XenServer, and Hyper-V.
- D. If the backup stream fails, the backup job will fail partially.

Answer: A

QUESTION: 143

An administrator is using Simplified Disaster Recovery to recover a Symantec Backup Exec 2012 server that contains a deduplication storage folder. Which two issues will exist after the recovery is performed? (Select two.)

- A. All backup sets that have been sent to the deduplication storage folder after it was backed up will be restored.
- B. Any existing backup sets that were sent to the deduplication storage folder after it was backed up are unavailable.
- C. The Symantec Backup Exec media server will be fully functional, including all media devices.
- D. The deduplication storage folder is an invalid source of a Simplified Disaster Recovery.
- E. The deduplication storage folder will still need to be restored via Shadow Copy Components.

Answer: B, E

QUESTION: 144

What are two capabilities of the Symantec Backup Exec 2012 Simplified Disaster Recovery (SDR) technology? (Select two.)

- A. It supports only 64-bit systems to back up and recover.
- B. It supports bare-metal recovery of Linux servers.
- C. It supports bare-metal and dissimilar hardware recovery.
- D. It supports bootable tape recovery.
- E. It supports direct recovery from locally attached devices.

Answer: C, E

QUESTION: 145

A recovery of a Microsoft Exchange 2007 mailbox database to a Recovery Storage Group (RSG) fails. What are two possible causes of the failure? (Select two.)

- A. The mailbox database in RSG is mounted.
- B. The antivirus scanner is interrupting the restore operation.
- C. The Symantec Backup Exec Service account belongs to domain admins group.
- D. The appropriate Exchange database needs to be added to the RSG.
- E. The VSS writer for the recovery storage group is missing.

Answer: A, D

QUESTION: 146

An administrator needs to restore a folder to a running Hyper-V virtual machine. What must be installed for this to be successful?

- A. Hyper-V management tools on the Symantec Backup Exec server
- B. Agent for Windows on the Hyper-V host server
- C. Hyper-V management tools on the Hyper-V host server
- D. Agent for Windows on the virtual machine

Answer: D

QUESTION: 147

An administrator needs to back up a server that resides in an untrusted domain. How can the server be accessed for backup without disrupting ongoing backup jobs?

- A. by changing the System Logon account to an account from the new domain
- B. by changing the Symantec Backup Exec service account to the new domain
- C. by adding a logon account for the new domain and setting it as the default logon account
- D. by adding a logon account for the new domain and selecting it in the backup job

Answer: D

QUESTION: 148
